Good morning, Greg-

The Scribe files attached are what R2 creates at this time. The R2Scribe file is one developed here using EDD builder in Element. The second text file is produced if you use the EPA Scribe report that comes packaged with Element. Really comes down to what is needed in the data exchange. Scribe can upload several data types, and whatever number of fields you need for analytical information. We use the R2Scribe EDD all the time for our clients.

Guessing coming to a file format consensus might be a consideration to streamline data to R8. Then, we can all produce the same format for their needs.

Regards,

Subject: Promium LIMS and Scribe

Dear LIMS users-

By now you may have seen or read about the accidental discharge along the Animas River in Colorado. Scribe is the requested data format for the inter-regional assistance project.

Can you get in touch with me if you have Promium LIMS and have used Scribe?

Thank you,

Greg
